Medical Shoes

WELCOME TO

# EXTROSTYLE

EXTROSTYLE IS A COMPANY IN CONSTANT EVOLUTION, ANCHORED TO ITS PHILOSOPHY BUT ORIENTED TOWARDS CONTINUOUS DEVELOPMENT.

Wellness: the value that inspires all our actions, from the design to the creation of footwear. Craftsmanship and passion are the elements that allow us to make anti-fatigue shoes that increase reactivity in situations of risk; because we are firmly convinced that **"WALKING IS LIVING"**.

Our footwear reduces fatigue and improves the quality of life of those who choose to face life with a smile, aware of their skills and their value. That is why for over thirty years we have accompanied our customers in daily life, including work, making every movement pleasant.

In our factories, located in the **Umbria** and the **Marche** region, attention to detail and a **100% Made in Italy** production chain are combined with an orientation towards **innovation in the footwear market** and **environmental sustainability**, our strengths.

Every day we demand the highest quality in every production process: all ExtroStyle footwear has the CE mark for **Medical Devices** (MDR directive 745/17) as class I surgical medical devices registered at the Ministry of Health, as well as the UNI EN ISO 9001 and UNI EN ISO 13485 **system certifications**.

## OUR DISTRIBUTORS

## CERTIFICATIONS AND RELIABILITY

**100% MADE IN ITALY**

All Extrostyle products have the **CE mark** in accordance with the MDR directive 745/17. To these, Extrostyle adds the UNI EN ISO 9001 and UNI EN ISO 13485 **System certifications**. The integrated management system allows to organise and monitor the company and its products at 360°.

Our organisation today allows us to offer a unique service, ensuring our customers delivery throughout Italy **WITHIN 24/48 HOURS** after receiving the order.

<b>2</b> HIGH RISK	Neuropathy or arterial disease. Relevant deformities but without ulceration and/or previous amputation.	Accomodate deformities and rebalance pressure peaks		Active Line Energy Line Rehabilitation Line
		FOOTWEAR Theraupedic  OUTSOLE Flexible bio-mechanic or semi-rigid	ORTHOPEDIC INSOLE  Customized	
<b>3</b> VERY HIGH RISK	Neuropathy or arterial disease. Deformities, ulceration and/or previous amputation.	Avoid reulceration. Accomodate deformities and rebalance pressure peaks		Active Line Energy Line Diabetic foot and post operative device
		FOOTWEAR Theraupedic or customized  INSOLE Bio-mechanic rigid or semi-rigid customized orthopedic braces	ORTHOPEDIC INSOLE  Customized	

# EXTROSTYLE INSOLE SYSTEM

The insoles used for the ACTIVE and ENERGY lines are composed of a high-density open-cell foam that ensures **absorption and deabsorption** capacity, keeping the foot ventilated, dry and odourless, as well as ensuring a pleasant sensation when walking. The **ergonomic design** of the footbed offers high comfort, minimising the effort and tensions in the plantar support, both during walking and in a static position, dampening the impact of pressure during walking.

## CHARACTERISTICS OF THE ENERGY LINE INSOLES

### →3 mm footbed

To be used immediately after an operation on the forefoot in the presence of very large dressings and bandages.

### →6 mm footbed

To be used during rehabilitation and in the presence of bandages and swellings of the forefoot.

### →9 mm footbed

To be used as a standard footbed already inside the footwear.

# FIBRE INSOLE SYSTEM

Fibre insoles and TECNICA footwear are great allies against diabetic foot issues, as they allow the authorised healthcare professional to use this footwear at all stages of risk, respecting all international protocols for the treatment and care of diabetic foot issues.

## CHARACTERISTICS OF FIBRE INSOLES

### S-Rigid insole

Extra-rigid fibreglass insole. It makes the outsole completely rigid, limiting the joint stress of the foot during walking and reducing significantly the pressure peaks on the forefoot, redistributing them correctly.

### S-Semirigid insole

Semi-rigid fibreglass insole. It makes the outsole semi-rigid, supporting the foot without forcing it. The pressure peaks on the forefoot are reduced and the load on the joints is limited.

# S-CLOUD INSOLE SYSTEM

The S-Cloud insole is supplied as an accessory for the ENERGY, REHABILITATION and Diabetic foot and post operative device lines, and for the Tecnica Stelt and Tecnica Biomed products. The innovative S-Cloud insole allows to remove little squares in the lower part of the entire insole surface thanks to the pre-incision of the 6 mm Evaform. The orthopaedic technician will identify the pieces to be removed to allow the

immediate discharge of pressures in the ulcerated area or in the area at risk of ulceration, allowing to create a precise zone of unloading of the necessary size in a precise point. The 3 mm self-modelling memory foam inside the insole, reduces the forces of the edges of the unloading area on the plantar area, distributing thus the body weight over a wider surface avoiding in this way pressure peaks.

## CHARACTERISTICS OF S-CLOUD INSOLES

1. Breathable, antibacterial, antimicrobial, anti-odour and hypoallergenic On-Steam cover.
2. 3 mm self-moulding memory foam.
3. 10 mm x 10 mm modular inserts in Evaform, 6 mm thick.
4. Fibre adhesive base to stabilise the Evaform modules.

## COMBINATION OF USE

The S-Cloud plantar system is divided into five lines of use:

- **S-Cloud Energy**  
compatible with the ENERGY line (pair)
- **S-Cloud Fisio**  
compatible with the REHABILITATION line (pair)
- **S-Cloud Diab**  
compatible with the Diabetic foot braces line (piece)
- **S-Cloud Stelt** (piece)
- **S-Cloud Biomed** (piece)

# S-AIR INSOLE SYSTEM

The S-Air insoles are included throughout the REHABILITATION LINE. They provide a pleasant

sensation when walking, avoiding also the consequences of the continuous impact on the joints.

## CHARACTERISTICS OF S-AIR INSOLES

- Full ventilation thanks to the 100% breathable foam, which allows the air circulation.
- Keeps feet dry eliminating humidity through its absorption system.
- Eliminates odours, neutralising germs thanks to an antibacterial treatment.
- Prevents fatigue thanks to its shock absorption capacity.
- Longer-lasting foam thanks to its storage capacity.

ACTIVE LINE

# ACTIVE LINE

ACTIVE is a line of footwear designed specifically to protect sensitive feet during physical activity. The biomechanical ACTIVE outsole allows a natural transition between the three phases of walking, ensuring a reduction of the pressure peaks on the forefoot and limiting the wear on the joints, thus allowing a more spontaneous walk and reducing the feeling of fatigue. The self-moulding and seamless

upper at the rubbing points envelops the anatomy of the foot and its possible deformities, ensuring comfort and preventing painful friction. The footwear of the ACTIVE line combined with fibre insoles can cover all stages of risk as they follow international protocols for the treatment and care of diabetic foot issues.

## DEFINITION OF THE OUTSOLE RIGIDITY

- **ACTIVE FLEXIBLE:** is when inside the shoe there is placed only the Tecnica insole.
- **ACTIVE SEMI-RIGID:** is when the semi-rigid fiber glass insert is placed inside the shoe + the Tecnica insole.
- **ACTIVE RIGID:** is when the rigid fiber glass insert is placed inside the shoe + the Tecnica insole.

## DESCRIPTION

- **ACTIVE FLEXIBLE:** indicated for the treatment of rheumatic foot and for the prevention of grade 0 and 1 diabetic foot in the presence of neuropathies accompanied by vascular diseases. The flexible biomechanical outsole facilitates the footstep rolling and distributes the pressure peaks.
- **ACTIVE SEMI-RIGID:** indicated for the treatment of rheumatic foot suffering from pain, and the prevention of grade 1 and 2 diabetic foot. The semi-rigid biomechanical sole is also ideal for diabetic patients who need maximum protection against ulcer risk.
- **ACTIVE RIGID:** indicated for the prevention of third level diabetic foot with the need to relieve the plantar pressure, designed for those who suffer from previous ulcerations or amputations, also indicated for patients who suffer from rheumatism and have serious deformities. The rigid biomechanical outsole limits the joint stress of the foot during walking and significantly reduces the pressure peaks on the forefoot and redistributes them correctly.

# ACTIVE PREVENTION FOOTWEAR LINE

The active **heel support** is padded, solid, envelops and protects the heel avoiding rubbing and injury, embracing it gently but at the same time giving stability to the rear foot.

The **PADDED LINING**, which is comfortable, breathable and **with no seams**, welcomes the foot in a protective and cushioning casing.

**Tecnica insole**, removable and in microfibre

PADDED LINING

The **biomechanical Active outsole** allows a gradual, soft and continuous support between the heel and the entire sole of the foot.

The central part of the outsole, being wide, guarantees **real stability** with consequent relaxation for the entire musculature. In addition, the Active outsole allows a natural "rolling" of the foot, without brusque movements.

**ENERGY LINE**

# ENERGY LINE

From the technology and the experience of ExtroStyle, and from scientific studies and advanced researches in the biomechanical field, results the new ENERGY line, a performant footwear with a current and innovative design in many respects, suitable for

the treatment of foot morphology alterations. The footwear of the ENERGY line combined with our fibre reinforcements can cover all stages of diabetic foot risk as they follow the international protocols for the treatment and care of diabetic foot issues.

## DEFINITION OF THE OUTSOLE RIGIDITY

- **ENERGY FLEXIBLE** is when inside the shoe there is placed only the Tecnica insole.
- **ENERGY SEMI-RIGID** is when the semi-rigid fiber glass insert is placed inside the shoe + the Tecnica insole.
- **ENERGY RIGID** is when the rigid fiber glass insert is placed inside the shoe + the Tecnica insole.

## DESCRIPTION

- **ENERGY FLEXIBLE:** is indicated for the treatment of the rheumatic foot disease and for the prevention of diabetic foot with risk degrees 0 and 1 in presence of neuropathies accompanied by vasculopathies. The flexible biomechanical outsole facilitates the footstep rolling and distributes pressure peaks.
- **ENERGY SEMI-RIGID:** is indicated for the treatment of rheumatic foot suffering from pain, and for the prevention of diabetic foot with risk degree 1 and 2. The biomechanical semi-rigid outsole is also ideal for diabetic patients who need maximum protection against the risk of ulceration.
- **ENERGY RIGID:** is indicated for the third level of diabetic foot prevention, with the need to relieve plantar pressure, designed for those suffering from previous ulcerations or amputations, also suitable for patients suffering from rheumatism or patients with severe foot deformities. The rigid biomechanical outsole limits the foot joint stress during walking and reduces significantly pressure peaks on the forefoot and redistributes them correctly.

ENERGY 10

## PHASE 1 PREVENTION

Thanks to the predisposition for the Energy 10 **removable insole**, it is a great ally for the prevention or containment of the most common foot diseases such as: hallux valgus, hammertoes, metatarsalgia, heelitis and vascular diseases as well as for the prevention with a 0 - 1 risk in diabetic foot. The **flexible biomechanical energy outsole** allows a natural transition between the three phases of walking,

ensuring a reduction of the pressure peaks on the forefoot and limiting the wear on the joints, thus allowing a more spontaneous walk and reducing the feeling of fatigue. The **self-moulding and seamless upper** at the rubbing points envelops the anatomy of the foot and its possible deformities, ensuring comfort and preventing painful friction.

## PHASE 2 POST-OPERATIVE REHABILITATION

The energy 10 **full opening shoe with 2 zips**, equipped with a flexible outsole, can be defined as a multifunctional shoe thanks to a combination of insoles that are variable in height. **It can be worn from the first day after the operation until the end of convalescence.** This implies a more correct and balanced walking and distribution of body weight, as well as an undeniable benefit for the back, pelvis and legs. Also the psychological well-being is not to be underestimated, since the energy 10 footwear can be worn on both feet

and immediately after the operation. A **removable heel** (patented system) inclined by 8° can be applied to keep the foot in talism for all rehabilitation courses where the surgeon deems it necessary. The Energy 10 footwear was subjected by the Moticon Science (independent company) of Munich, to test the **PLANTAR DISCHARGE**, comparing it with five other footwear of other brands among the most sold on the European market and was the **BEST AND MOST EFFECTIVE IN ALL THE COMPARISON TESTS.**

## PHASE 3 PROTECTION OF FOOT HEALTH

The Energy 10 footwear has been designed for men and women who want to live their natural "vital energy". The innovative technical characteristics open the way to a new idea of well-being, health and vitality. Indeed the line

is designed **to meet the needs and to prevent and manage the problems of the sensitive foot** but above all, to live well.

**ENERGY MORRIS RIGID**

Certification no. 1903608

Color Blue

Sizes from 35 to 50

Ref. no. EX035600

**ENERGY JACQUES FLEX**

Certification no. 1920242

Color Blue

Sizes from 35 to 50

Ref. no. EX033900

The **ENERGY MORRIS RIGID** and **ENERGY JACQUES FLEX**, thanks to the double velcro closure, have a complete opening in the anterior part of the shoe, making it more practical to wear. The extra wide fit and the adjustable internal volume make these shoes suitable for patients with large, bandaged, swollen or edematous feet. In addition, they are designed for the insertion of a customized insole.

→ **SEMI-RIGID OUTSOLE:** to be used in primary

prevention with risk degree 0 or 1, polyarthritis, Morton's neuroma, osteoarthritis, etc.

→ **RIGID OUTSOLE:** to be used in secondary prevention with risk degree 2 and 3, for patients with previous ulcerations at risk of recurrence, for patients with deformities, ulcerations or previous amputations, arthrodesis of the toes, arthrodesis of the tarsus, Charcot foot or biomechanical problems of movement.

**COMFORT LINE**

# COMFORT LINE

## COMFORTABLE, SOFT, SOLID AND RESISTANT FOOTWEAR

The COMFORT line consists of a collection of unique, **functional and practical** footwear which combine technical comfort and style in the same product. They are suitable for all ages and all seasons. All models have a large internal volume for the foot support and are suitable for the insertion of custom-made insoles. The trendy colours and the lining in On Steam® microfibre material offer a very pleasant

touch sensation, **guaranteeing 100% breathability**. The heel, of ideal height, is designed to guarantee a correct posture and offer a right boost for walking. The attention to detail, the modern design and the constant research for materials make TECNICA a product of great quality, guaranteed by an Italian company that for over thirty years has designed and manufactured products of excellence.

**ON STEAM®**

**THE WHOLE COMFORT LINE HAS THE INSOLE AND THE SHOE LINING COVERED BY ON STEAM® MICROFIBER, WHICH ABSORBS ODORS, IS ANTIBACTERIAL AND BREATHABLE.**

On Steam® is the new 100% breathable microfibre, with a sensation like leather and with a capacity of humidity absorption 8 times its weight in water. It provides the maximum comfort, total dryness, and a thermo-regulating effect. Sweat can not accumulate inside the footwear because the textile leads it out, where it evaporates, maintaining thus the foot dry in every moment. The main characteristics of this microfibre are: absorption action, desorption action,

maximum water removal, complete dryness, high abrasion resistance, it is antibacterial, antimicrobial, and odorless, with a thermo-regulating effect, it is also hypoallergenic, thermoformable, and Chromium VI-free, and has an ecological production system without CO<sub>2</sub>. Furthermore, this microfibre has also the OEKO-TEX Standard 100 ecological certification: an external laboratory has submitted the textile to strict tests and has certified the total absence of harmful health agents.

# REHABILITATION LINE

# REHABILITATION LINE

**A LINE DESIGNED FOR THE TREATMENT OF MOST FOOT DISEASES THAT COMBINES THE COMFORT AND SOFTNESS OF A SLIPPER WITH THE STABILITY AND RESISTANCE OF A SHOE.**

This line of footwear is mainly used to improve walking in the elderly and in people who suffer from rheumatism. They are also used as post-intervention and rehabilitation footwear. The non-slip wide outsole is made with shock-absorbing compound that, combined with the thermoformable stabilising heel counters, guarantees a safer walk. The breathable upper is made of materials that shape around the forefoot and that allow to accommodate deformity or bandages without pain.

The velcro closure and the full opening upper allow those with joint mobility problems to comfortably wear the shoe with extreme ease, adjusting the velcro closure in the most optimal way. In addition, these footwear can be used in primary prevention with risk degree 0-1 in the diabetic foot, while by using the S-Rigid Fisiso fibre insoles, which stiffen the outsole, it can be used in secondary prevention with risk degree 2 - 3.

**DIABETIC FOOT  
BRACES AND  
POST-OPERATIVE  
DEVICES LINE**

# INTRODUCTION TO THE DIABETIC FOOT BRACES AND POST-OPERATIVE DEVICES LINE

The Tecnica FOOT-ANKLE BRACES and POST-OPERATIVE DEVICES are designed for the **treatment of the diabetic foot in its acute phase** and for the pressure unloading in case of **neuropathic and ischemic forefoot or midfoot ulcers**. They are also ideal for **post-surgical treatments** and for all foot surgeries. All uppers have a super-soft padding and no internal

seams in order to minimize the frictions. The multi-velcro closure guarantees a comfortable fit even with bandaged foot and facilitates the adjustment of the footwear. In addition, they have a stabilizing and thermoformable heel-counter and a shock-absorbing rigid and rocking outsole with a non-slip island to ensure better stability.

High thermoformable stiffener.

Upper with super-soft padding with no internal seams.

Rigid shock-absorbing rocking outsole with non-slip island.

Multi velcro closure that guarantees adaptability and ease of adjustment.

**INDICATIONS**

- Diabetic plantar ulcer
- Plantar ulcer
- Post-amputation rehabilitation (up to trans-metatarsal amputation)
- Post-operative rehabilitation of the tarsus
- Fracture of the tarsus
- Management of the chronic phase of Charcot's foot
- Malleolus fracture

**CHARACTERISTICS**

High leg-foot brace, which is adaptable to the patient, allows the displacement of part of the load on the ankles and calves. The outsole, thanks to the features of movement control and pressure redistribution decompresses the areas affected by the injury, improving thus significantly the ambulation. High thermoformable stiffener. Rigid, anti-flexion and rocking outsole. Variable volume.

Predisposition for the S-Cloud Diab insole.  
 Predisposition for the S-Tal Diab insole.

**INDICATIONS**

- Diabetic plantar ulcer with vascular complications affecting the leg (combined with the S-Cloud Diab insole)
- Neuroischemic ulcer
- Management of the injured foot or foot with ulcerative risk
- Compound fracture of the metatarsals
- Post-amputation rehabilitation of the toes
- Fracture of the toes
- Surgical treatment of the toes
- Pre-surgery stabilization

**CHARACTERISTICS**

Low leg-foot brace, which is adaptable to the patient. The outsole, thanks to the features of movement control and pressure redistribution decompresses the areas affected by the injury, improving thus significantly the ambulation and the recovery time.

High thermoformable stiffener. Rigid, anti-flexion and rocking outsole. Variable volume.

Predisposition for the S-Cloud Diab insole.  
 Predisposition for the S-Tal Diab insole.

- Diabetic ulcerations
- Plantar ulcerations
- Neuroischemic ulcerations
- Fracture of the metatarsals
- Surgery and fractures of the toes
- Rehabilitation after toes amputation
- Pre-surgery stabilization
- Instability of the hindfoot

**CHARACTERISTICS**

Easy fit and maximum safety for the patient during the acute phase. The thermoformable upper in pel-flex, which is partially waterproof, guarantees thermal and hygienic protection to the foot. Radiolucent and anti-friction. Thermoformable stiffener. Rigid, anti-flexion and rocking outsole. Variable volume. Predisposition for the insertion of the S-Cloud Diab insole.

Sizes				
S	M	L	XL	XXL

**TECNICA HEEL**

Certification no. 1294420

Color Black

Sizes from S to XL

Ref. no. EX022810

**INDICATIONS**

- Post-surgery rehabilitation of the heel area
- Wounds or ulcers of the heel area
- Post-surgery fractures and/or calcaneus ulcers (second treatment) and ulcers at the insertion of the Achilles tendon
- Bursitis

**CHARACTERISTICS**

The balance of the weight is moved to the front of the foot thanks to the unloading insole and thanks to the outsole, which is designed to totally release the heel from the pressure load. The square shape of the outsole offers more space for bandages. Movable rear-cover to preserve the heel from impacts. Non-slip outsole to ensure maximum safety during walking. Total opening with velcro-straps. Removable insole.

- Post-surgery of hallux valgus
- Hammer toes
- Morton's neuroma
- Fracture of the toes
- Nail removal
- Plantar wart removal

**CHARACTERISTICS**

Rehabilitative foot orthosis, with radiolucent upper, which is antifriction and washable. The non-slip, rigid and rocking outsole unloads the pressure from the forefoot, giving thus greater stability without altering the posture, ensuring a rapid recovery of all functions. Thermoformable stiffener. Variable volume. Predisposition for the S-Cloud Diab insole. Predisposition for the S-Tal Diab insole.

Sizes				
S	M	L	XL	XXL

**TECNICA VALGUS**

Certification no. 983649

Color **Black**  
 Sizes **from S to XXL**  
 Ref. no. **EX022540**

**INDICATIONS**

- Post-surgery of hallux valgus, hammer toes, Neuroma of Morton
- Fracture of the toes, nail removal
- Plantar wart removal
- Best solution for diabetic feet and indicated in presence of trans-metatarsal amputations
- Ray amputations
- Chronic Charcot of the forefoot and of the midfoot
- Minor amputations of the forefoot

**CHARACTERISTICS**

The rigid and rocking outsole cushions the step and immobilizes the metatarsophalangeal area, reducing the pressure, allowing thus a total discharge of the trans-metatarsal area. Allows to accommodate deformities and allows to avoid dangerous frictions. The wide plant and the anti-stumbling outsole ensure maximum stability during walking. Higher stabilizing stiffener for better foot support. Variable volume. Removable insole.

Sizes **from 35 to 48**

Ref. no. **EX022980**

**INDICATIONS**

- Rigid biomechanical outsole
- 20mm outsole which minimizes discrepancy with the contralateral limb
- S-Tal Stelt insole included
- Stabilizing and thermoformable stiffener
- Multi-velcro closure
- Ambidextrous
- Predisposition for the insertion of the S-Cloud Stelt unloading insole

**CHARACTERISTICS**

**Tecnica STELT** is an ambidextrous footwear, indicated both as a brace and as a post-operative device. It is particularly suitable for the relieve of pressure in case of neuropathic and ischemic ulcers in the forefoot and midfoot. Thanks to the rigid outsole it guarantees the maximum stability and immobilization of the foot, optimizing thus the recovery times. It is also used as a postoperative device for all surgeries on the forefoot. Thanks to its very wide fit, the footwear can be used also with important bandages. The height of the outsole of 20 mm allows to maintain the physiological posture and to minimize the discrepancy with the contralateral limb, helping thus to simulate a natural walk. The S-Tal Stelt insole is included in the package and has an 8° talism angle, which allows to transfer the pressure from the forefoot to the hindfoot.

**INDICATIONS**

- II° post-surgical treatment

**CHARACTERISTICS**

Super light and very stable footwear thanks to the thermoflexible stiffener, with open front, particularly suitable for deformities and injuries in the forefoot area and ideal also for physiotherapy for functional recovery. The variable internal volume of the upper, which can be completely opened, facilitates the fit of bandaged or painful feet in the phase following the brace. The stiffener is customizable by the orthopedic technician so that the fit can be adapted to the patient's foot. Non-slip outsole for maximum safety during walking. Breathable upper in washable microfiber.

Ref. no. EX021350

**INDICATIONS**

- Post-surgical treatment of forefoot fractures
- Hallux valgus, hammer toes
- Bursitis
- Forefoot and interdigital ulcerations

**CHARACTERISTICS**

Designed in order to provide protection and relief to the forefoot. The outsole in talism release the operated area from the pressure which is shifted to the metatarsal and to the heel. Allows a precocious walking, anticipating functional recovery. Wide shaped outsole and rigid stiffener for maximum stability. Variable volume. Upper in breathable microperforated fabric washable at 40°.

## INTRODUCTION

# EXTREME LINE

## Footwear with double certification

From the technology and experience of ExtroStyle, a leading manufacturer of footwear for foot health, comes a unique line of footwear: **EXTREME!** Especially designed to protect sensitive feet during work. **THIS FOOTWEAR POSSESSES A DOUBLE CERTIFICATION: SAFETY CERTIFICATION AS IT IS A PPE PERSONAL PROTECTIVE DEVICE ACCORDING TO EN ISO**

**20345:2011 AND, AT THE SAME TIME, AN ORTHOPAEDIC FOOTWEAR MD MEDICAL DEVICE ACCORDING TO CE MDR 745/2017.** They have been created for women and men who are active every day in the world of work wearing a protective device, with the opportunity to wear a shoe designed for the insertion of a customised foot orthosis.

REF. N° EX067250

The **EXTREME outsole** has a special tread design that guarantees high anti-slip properties, both in the longitudinal and transverse direction, as well as being antistatic and resistant to hydrocarbons, oils and greases in general.

DESCRIPTION

# EXTREME LINE AS PERSONAL PROTECTIVE EQUIPMENT

**EXTREME** safety footwear for professional use is certified in accordance with the latest regulations; it is suitable for most types of use as it is **S3 SRC PROTECTION** grade. It is a **soft and a lightweight shoe, with leather upper and technical fabric inserts, anti-crush toe cap, antistatic and multi-layer ballistic fabric insert with the absolute guarantee of a puncture barrier, which is also highly flexible.**

TEPOR's waterproof and breathable membrane does not allow water to enter the shoe and, at the

same time, allows the foot's moisture to escape. **TE-POR** thereby guarantees maximum comfort while keeping the foot dry with an optimal microclimate inside the shoe.

The **polyether sole** guarantees absolute comfort due to its lightness, ensures flexibility and absorption of vibrations and shocks, is antistatic and resistant to hydrocarbons and oils and greases in general. The extreme compactness and the special tread design guarantee excellent anti-slip properties in both longitudinal and transverse directions.

EN ISO 20345:2011 STANDARD SAFETY CATEGORY

## INDICATIONS FOR USE AS PPE

The S3 standard corresponds to work shoes with full protection, which is why they are in high demand. They combine the properties of S2 with the anti-puncture layer typical of S1 footwear. An ideal combination for many high-risk work environments, such as:

**LIGHT INDUSTRY** → • Food and Beverage • Pharmaceutical • Mechanical • Chemical • Automotive • Textile • Footwear • Clothing • Wood • Paper • Construction.

**HEAVY INDUSTRY** → • Oil and Gas • Metallurgy • Mechanical carpentry • Shipyards.

**TRADES** → • Personal Care • Electrician • Carpenter • Mechanic • Plumber • Mason.

**LOGISTICS AND TRANSPORT** → • Warehousing • Agriculture and livestock • Security and Surveillance.

**CATERING AND HOSPITALITY** → • Hospital Healthcare • Services and Tertiary Sector.

INDICATIONS FOR

## REMOVABLE INSOLE

The standard removable insoles used for the **EXTREME** line are composed of a high-density, open-cell foam that provides total breathability while protecting against perspiration due to its moisture-absorbing and moisture-wicking qualities, keeping the foot ventilated, dry and odour-free, and providing a pleasant sensation during walking. The ergonomic design of the insole provides a high degree of comfort, minimising strain and tension in the plantar support, and cushioning impact pressure both while walking and also in a static position.

It is guaranteed that the performance has been determined by carrying out technical tests on the footwear fitted with a **removable insole**.

If it is necessary to replace the standard removable insole included with the footwear at the time of purchase, it must be replaced with an identical one supplied by the manufacturer in order to not alter the certified configuration. If it is necessary to insert a corrective and/or antalgic foot orthosis for preventive or curative foot care, in this case, the treatment shall only be performed by a qualified orthopaedic technician, who must comply with the manufacturer's recommendation that the maximum height of the orthosis near the toe cap does not exceed 6 (six) millimetres.

Compliance with the manufacturer's instructions is indispensable in order to not alter the technical tests carried out during certification.

## DESCRIPTION

# EXTREME S3 SRC

## METAL FREE

The EXTREME **heel support** is padded and robust, it gently embrace the heel area while providing stability and protection.

The 1.6–1.8 cm thick **padded leather** upper, with almost no seams, accommodates the foot in a protective and shockabsorbing envelope.

## SUPER LIGHT

The highly **breathable AIRTEK lining** provides the inside of the shoe with a complete air exchange with a "chimney effect" in order to maintain an optimal microclimate.

The **biomechanical outsole** provides a gradual, soft and continuous support from the heel to the entire sole of the foot, assuring a natural "rolling" of the foot, with vibration and shock absorption.

**Outsole insert** made of 100% real cork for lightness and thermal isolation.

The **ergonomic design** of the insole provides a high degree of comfort, minimising strain and tension in the plantar support, and cushioning impact pressure both while walking and also in a static position.

**Composite toe cap** with impact protection up to 200J and compression protection up to 15 kN.

Multi-layer **anti-puncture insert** made of ballistic fabric with the absolute guarantee of a puncture barrier, which is also highly flexible.

## THE EXTREME LINE IS METAL FREE

The absence of metal parts does not affect the safety and the protection of the wearer; on the contrary, **it guarantees very high safety standards during any kind of performance.** EXTREME Metal Free shoes are appreciated by all those who work in environments with the presence of metal detectors, such as: airports, banks, public offices, post offices, museums, boarding areas, customs offices and much more.

DESCRIPTION

# EXTREME LINE AS A MEDICAL DEVICE

## Medical Device

The **EXTREME** line is especially designed to protect sensitive feet during work activities. It is produced in two versions with a FLEXIBLE outsole and with a RIGID outsole in accordance with international protocols for the treatment and care of diabetic feet. The 1.6–1.8 mm thick full-grain leather upper combined with the waterproof and breathable **TE-POR** membrane and the highly breathable **AIR-TEK** lining provide the inside of the shoe with a complete “chimney effect” air exchange while maintaining an

optimal microclimate. The absence of internal seams ensures that there are no chafing and pressure points. It envelops the anatomy of the foot and any deformities while providing comfort and preventing annoying friction. The biomechanical **EXTREME** outsole allows a natural transition between the three phases of walking: it ensures a reduction of pressure peaks on the forefoot, limits wear and tear on the joints, enables spontaneous walking and reduces the sensation of fatigue.

## DIRECTIONS FOR USE

# EXTREME FLEXIBLE OUTSOLE

EXTREME FLEXIBLE OUTSOLE with removable insole is a medical device used for restraint purposes with a customised insole made by qualified health professionals for the treatment of alterations in the morphology of the foot. Suitable for all those who use a customised foot orthosis to correct, prevent or treat various temporary or chronic foot disorders. Particularly indicated for the treatment of rheumatic

foot and grade 0 and 1 prevention of diabetic foot disease also in presence of neuropathies accompanied by vasculopathies, as well as metatarsalgia, polyarthritis and arthrosis. The biomechanical sole facilitates the step rolling by supporting the foot without constricting or forcing it. It reduces pressure peaks on the forefoot and limits the load on the joints.

## INDICATIONS FOR USE IN THE PRESENCE OF:

- Primary prevention in diabetic foot disease with risk grade 0 or 1
- Polyarthritis
- Morton's neuroma
- Arthrosis
- Metatarsalgie

# EXTREME RIGID OUTSOLE

EXTREME RIGID OUTSOLE is a medical device used for secondary prevention for diabetic patients with risk levels 2 and 3, where there is the need to relieve plantar pressure: designed for those suffering from previous ulcers or amputations, it is also suitable for patients suffering from rheumatism

and severe deformities. The rigid, biomechanical outsole limits joint stresses of the foot during walking, by significantly reducing pressure peaks in the forefoot and redistributing them correctly, thus reducing the risk of reulceration in diabetic patients by more than 60%.

## INDICATIONS FOR USE IN THE PRESENCE OF:

- Diabetic patient with risk level 2
- Previous ulcers at risk of recurrence with risk grade 2
- Deformity, ulceration or previous amputation with risk grade 3
- Finger and tarsal arthrodesis
- Charcot foot
